| Liquids, Treatment of. (P) Faulkner and Wilson. (v, 1886).....                                                  | 434  |
| Preparations, Report on. (Arends.) (xii, 1893).....                                                             | 859  |
| Wash, Apparatus for Acetifying. (P) Luck. (i, 1882).....                                                        | 197  |
| Aldehyde, Action of Ortho-nitrobenzaldehyde on. (Baeyer and Drewson.) (iii, 1884).....                          | 27   |
| Action of Phenols on Cinnamic. (Ihl.) (vii, 1889).....                                                          | 640  |
| Antiseptic Properties of Formic. (Trillat.) (xi, 1892).....                                                     | 772  |
| Detection of, in Alcohol. (Windisch.) (vi, 1887).....                                                           | 388  |
| Exam. Alcohol for. (Guard and Roques.) (vii, 1889).....                                                         | 219  |
| Formic, Applied to Photography. (Schnauss.) (ix, 1890).....                                                     | 104  |
| Gayon's Test for. (Borntrager.) (x, 1891).....                                                                  | 575  |
| In Commercial Alcohol, Detec. of. (Gayon.) (vii, 1888).....                                                     | 238  |
| In Eau-de-Vie de Piquette. (Muller.) (xi, 1892).....                                                            | 256  |
| Obtaining Monomethyl Ethers of Proto-Catechuic. (P) Bertram. (xi, 1892).....                                    | 58   |
| Of Lemon-grass Oil. (Barbier and Bouveault.) (xiii, 1894).....                                                  | 1086 |
| Polymeric Base from Amido-Acetic. (P) Pitt. From Chemische Fabrik vormals Schering. (xii, 1894).....            | 1218 |
| Preparation of. (Arends.) (xii, 1893).....                                                                      | 860  |
| Presence of Cinnamic, in Woody Matter. (Ihl.) (viii, 1889).....                                                 | 640  |
| Reaction of, on Aniline Hydrochlorate. (P) Imray. From The Actien Gesellschaft für Anilin Fab. (iii, 1884)..... | 244  |
| Transformation of Alcohol into. (Linossier and Roux.) (ix, 1890).....                                           | 879  |
| Aldehydes, Action of, on Phenols:                                                                               |      |
| (Michael.) (iii, 1884).....                                                                                     | 253  |
| (Michael and Comey.) (iii, 1884).....                                                                           | 250  |
| Analysis of. (Mohler.) (x, 1891).....                                                                           | 391  |
| And Ketones, Discriminating between. (Villiers and Fayolle.) (xiv, 1895).....                                   | 771  |
| And Ketones, Phenylhydrazine as Reagent for. (Fischer.) (iii, 1884).....                                        | 331  |
| And Ketones, Reaction of, with Aromatic Nitro-Compounds. (Bitto.) (xii, 1893).....                              | 66   |
| Aromatic Sulphurly Derivatives of. (P) Pitt. From Chem. Fabrik vormals Schering. (xii, 1894).....               | 1218 |
| Condensation of. (Wurgaff.) (xiii, 1894).....                                                                   | 798  |
| Condensation of Aromatic, with Phenols. (Trzeinski.) (iii, 1884).....                                           | 252  |
| Detection of, in Spirit. (Gayon and Dupetit.) (viii, 1889).....                                                 | 560  |

|                                                                                                                                                         | PAGE     |

| Manufacture of:                                                                                            |      |
| (P) Barrow. (vi, 1887).....                                                                                | 547  |
| (P) Claus. (ii, 1883).....                                                                                 | 248  |
| (P) Haddock and Leith. (xi, 1892).....                                                                     | 433  |
| (P) Hargreaves and Bird. (xiii, 1894).....                                                                 | 250  |
| (P) Leith. (x, 1891).....                                                                                  | 255  |
| Manufacture of, by Electrolysis. (P) Parker. (xii, 1893).....                                              | 1042 |
| Manufacture of, by the Hargreaves-Bird System of Electrolysis. (Hargreaves.) (xiv, 1895).....              | 1011 |
| Manufacture of Caustic. (P) Lake. From Kayser Patent Co. (xi, 1892).....                                   | 36   |
| Manufacture, Recent Progress in. (T.R.) (ix, 1890).....                                                    | 671  |
| Manufacture of, from Sewage. (P) Burns. (vi, 1887).....                                                    | 833  |
| Metals. (Joannis.) (ix, 1890).....                                                                         | 568  |
| Metals, Behaviour of, at High Temperatures. (Dittmar.) (vii, 1888).....                                    | 730  |
| Metals, Compounds of, with Ammonia. (Bakhuys-Roosboom.) (ix, 1890).....                                    | 507  |
| Metals, Decomposition of Normal Sulphates of. (De la Harpe.) (iv, 1885).....                               | 510  |
| Metals, Oxidation of the. (Holt and Sims.) (xiii, 1894).....                                               | 526  |
| Method and App. for Manuf. of. (P) Mills. (xi, 1892).....                                                  | 433  |
| Method of Packing. (P) Taylor. (vi, 1883).....                                                             | 177  |
| Of Soap, Free Caustic. (Wilson.) (vii, 1889).....                                                          | 478  |
| Or Lime in Raw Sugar, Importance of Definite Quantity of. (Strohmer.) (vii, 1888).....                     | 334  |
| Process, A New. (Staveley.) (vii, 1888).....                                                               | 807  |
| Processes, Use of Hydrocarbons in. (P) Thwaite and Pedder. (v, 1886).....                                  | 379  |
| Production of Caustic:                                                                                     |      |
| (P) Eichstalt. (xi, 1892).....                                                                             | 37   |
| (P) Lake. From Kayser, Williams, and Young. (vi, 1887).....                                                | 730  |
| (P) Lunge and Maxwell-Lyte. (xiii, 1894).....                                                              | 734  |
| (P) Vantm. (xiii, 1894).....                                                                               | 958  |
| Production of Caustic and Chlorine. (P) Lyte. (xi, 1892).....                                              | 646  |
| Proof Vessels. (Dittmar.) (xi, 1884).....                                                                  | 303  |
| Putting up Caustic. (P) Rabbitt. (i, 1882).....                                                            | 321  |
| Residues, Utilisation of. (P) Wieg. (v, 1886).....                                                         | 325  |
| Retention of, by Precipitated Barium Carbonate. (Watson Smith.) (i, 1882).....                             | 86   |
| Salts, App. for Electrolysis of. (P) Störmer. (xiv, 1895).....                                             | 809  |
| Separation and Utilisation of Used. (P) Lane and Steunert. (iii, 1884).....                                | 107  |
| Separation of, from Electrolytes. (P) Kellner. (xi, 1892).....                                             | 755  |
| Test for Kerosene, Naphtha Products, and Hydrocarbon Lubricants. (Lissens and Stepanow.) (xiii, 1894)..... | 177  |
| Trade Combination. (T.R.) (ix, 1890).....                                                                  | 780  |
| Trade, Progress of the. (T.R.) (vii, 1888).....                                                            | 875  |
| Trade, Statistics of English. (First Proceedings).....                                                     | 4    |
| Use of Calcium Sulphhydrate in Manufacture of. (Leith.) (x, 1891).....                                     | 214  |
| Use of Sulphuretted Hydrogen in Manufacture of. (P) Simpson. (x, 1891).....                                | 926  |
| Alkali-Waste, Apparatus for Treatment of. (P) Simpson. (ii, 1883).....                                     | 476  |
| Cement from. (P) Rigby, Neill, and Carr. (xiii, 1894).....                                                 | 638  |
| Decomposition of. (Fawcitt.) (v, 1886).....                                                                | 93   |
| Estimation of Soda in. (Lunge.) (ix, 1890).....                                                            | 1018 |
| Extract of Sulphur Comp. from. (P) Simpson. (iii, 1884).....                                               | 259  |
| Extraction of Sulphur from. (P) Ravess. (i, 1882).....                                                     | 454  |
| For Treatment of Parasitic Diseases. (DuPontel.) (v, 1886).....                                            | 143  |
| Free Sulphur or Free Sulphurous Acid from. (P) Claus. (iii, 1884).....                                     | 485  |
| From Leblanc Process, Utilisation of. (P) Parnell and Simpson. (iv, 1885).....                             | 498  |
| Manuf. of Portland Cement from. (Spackman.) (xi, 1892).....                                                | 497  |
| Manufacture of Sulphur, &c. from. (P) Maudsley and Macfarlane. (v, 1886).....                              | 536  |
| Manure from. (P) Brock. (i, 1882).....                                                                     | 374  |
| Obtaining Sulphuretted Hydrogen and Calcium Carbonate from. (P) Renaut. From von Miller. (iii, 1884).....  | 485  |
| Production of Sulphuretted Hydrogen from. (P) Davidson and Davis. (x, 1891).....                           | 643  |
| Recovery of Sulphur from:                                                                                  |      |
| (Chance.)..... (i, 1882), 172; (vii, 1888), 162                                                            |      |
| (Dyers.)..... (iii, 1884), 580; (iv, 1885), 31                                                             |      |
| (P) Weldon. (ii, 1883), 414; (iv, 1885), 171                                                               |      |
| (P) Weldon. From Lombard. (iii, 1884).....                                                                 | 259  |
| Regeneration of Sulphur and Limestone from. (Opl.) (i, 1882).....                                          | 452  |
| Sulphuric Acid from. (P) Hanson. (vii, 1888).....                                                          | 625  |
| Treating Ammonium Chloride with. (P) Leith. (x, 1891).....                                                 | 307  |
| Treatment of. (P) Newhall. (v, 1886).....                                                                  | 167  |
| Treatment of, and Apparatus therefor:                                                                      |      |
| (P) Chance. (vii, 1888).....                                                                               | 210  |
| (P) Hargreaves and Robinson. (viii, 1889), 118; (ix, 1890), 509                                            |      |
| Treatment of, for Decolorisation of Sewage. (P) Hanson. (vii, 1888).....                                   | 763  |
| Treatment of Yellow Liquors from, to obtain H <sub>2</sub> S. (P) Chance. (viii, 1889).....                | 119  |
| Utilisation of:                                                                                            |      |
| (Knezevit.) (i, 1882).....                                                                                 | 81   |
| (P) Maeter. (i, 1883).....                                                                                 | 349  |
| Alkali Works Act Amendment Bill, Discussions on. (T.R.) (xi, 1892).....                                    | 471  |
| Works Act, Notes on the. (T.R.) (vii, 1888).....                                                           | 785  |
| Works, Analytical Methods for. (Lunge.) (ix, 1890).....                                                    | 1013 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                                            |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                         |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Treatment of Residual Salts in Manufacture of Caustic. (P) Healey, Pryde, and Swin. (iv, 1885).....     | 117                                                                  |                                                              |                                                         |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                           |                                                                           |                                                                            |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Utilisation of Lime and Baryta Sulphate in Manufacture of. (P) Parnell and Simpson. (vii, 1888).....    | 323                                                                  |                                                              |                                                                        |                                                                           |                                                                            |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

                                                                         |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

                                                                  |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                        |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

        |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                 |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

  |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Solutions, Treatment of Sulphides in, by Electrolysis. (P) Deacon, Hurter, and Elmore. (v, 1886).....   | 99                                                                   |                                                              |                                                                        |                                                                           |                                                                            |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

 |                                                                        |                                                                           |                                                                            |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

                                                                 |                                                                           |                                                                            |                                                                             |                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

                                                               |                                                               | |-----------------------------------------------------------------------------------------------------------------------|----------|--------------------------------------------------------------------------------------------------------|------|
| Alkaloids— <i>cont.</i>                                                                                               |          | Alloys, Action of Caustic Soda on. (Venator.) (v, 1886).....                                           | 341  |
| Potassium Permanganate as a Reagent for. (Beckurts.) (v, 1886).....                                                   | 510      | Action of Milk of Lime on. (Schmelzer.) (v, 1886).....                                                 | 493  |
| Presence of, in Old Flour. (Baland.) (v, 1886).....                                                                   | 171      | Aluminium-Antimony. (Roche.) (xii, 1893).....                                                          | 840  |
| Properties of Cinchona. (von Miller and Rohde.) (xiv, 1895).....                                                      | 883      | And Metals, Curious Properties of. (Roberts-Austen.) (viii, 1889).....                                 | 52   |
| Pyridine. (de Coninck.) (vi, 1887).....                                                                               | 51       | App. for Coaling Metal Sheets with. (P) Heathfield. (ix, 1890).....                                    | 346  |
| Quinine:                                                                                                              |          | App. for Producing. (P) Wise. From the "Schweizerische Metallurgische Gesellschaft." (viii, 1889)..... | 122  |
| (P) Giacoso. (iv, 1885).....                                                                                          | 136      | App. for Treating, by Electrolysis. (P) Cassel. (v, 1886).....                                         | 454  |
| (Hesse.) (vii, 1888).....                                                                                             | 350      | Application of Aluminium. (P) Taylor. (xii, 1894).....                                                 | 42   |
| Quinine, Conversion of, into their Isomerides. (Skraup.) (xii, 1893).....                                             | 707      | Bearing Metal. (Dudley.) (xi, 1892).....                                                               | 440  |
| Reactions of Salts of the. (Colson.) (ix, 1890).....                                                                  | 1155     | Bronze, Production of. (P) Huntington and Preston. (xii, 1893).....                                    | 695  |
| Reactions of "Vanado-Sulphuric Acid" on. (Kundrat.) (viii, 1889).....                                                 | 421      | Coating Iron and Steel with. (P) Fenby and Moore. (xii, 1894).....                                     | 400  |
| Relation of Pyridine to the. (Edinger.) (ix, 1890).....                                                               | 649      | Coating Metallic Surfaces with. (P) Stuart and Binney. (vi, 1887).....                                 | 823  |
| Report on. (T.R.) (ix, 1890).....                                                                                     | 1079     | Composition of. (P) Dick. (i, 1882).....                                                               | 370  |
| Separation of Opium. (Plüger.) (vi, 1887).....                                                                        | 840      | Constitution of. (Le Chatelier.) (xiv, 1895).....                                                      | 971  |
| Study of the. (de Coninck.) (iv, 1885).....                                                                           | 688      | Containing Iron or Steel. (P) Hall. (viii, 1889).....                                                  | 199  |
| Sulphonic Acids of the Cinchona. (Hesse.) (xi, 1892).....                                                             | 176      | Cupellation of Bismuth-Silver. (Smith.) (xiii, 1894).....                                              | 765  |
| Treatment of Amorphous, obtained in Preparation of Cocaine. (P) Liebermann and Giesel. (viii, 1889).....              | 133      | Desulphurising Certain. (P) Rossignaux. (xi, 1892).....                                                | 615  |
| Vanadium Sulphate a Reagent for. (Mandelin.) (ii, 1883).....                                                          | 545      | Determination of Manganese in. (Hampe.) (iv, 1885).....                                                | 690  |
| Vegetable Organisms in Solutions of. (Soubiran.) (vi, 1887).....                                                      | 381      | Direct Manufacture of Metallic. (P) McCollay and Allen. (viii, 1889).....                              | 549  |
| Vegeto- and Ptomanes, Discrimination between. (Beckurts.) (i, 1882).....                                              | 200      | Electrical Conductivity in Fused. (Rosing.) (vi, 1887).....                                            | 48   |
| Volumetric Determination of the. (Léger.) (xii, 1893).....                                                            | 470      | Electrolytic Production of Chromium. (P) Placet and Bonnet. (xiii, 1894).....                          | 646  |
| Volumetric Estimation of the. (Barthe.) (xii, 1893).....                                                              | 294      | Electro-plating Chromium. (P) Slater. (iv, 1885).....                                                  | 351  |
| Yield of, from Lupins. (Hiller.) (iv, 1885).....                                                                      | 602      | Estimation of Lead in Tin:                                                                             |      |
| Alkanet Dye, Detection of. (Herz.) (v, 1886).....                                                                     | 30       | (Schwartz.) (vii, 1888).....                                                                           | 237  |
| Identification of. (Vogel.) (iv, 1885).....                                                                           | 611      | (Winkler.) (vii, 1888).....                                                                            | 772  |
| Alkanin. (Liebermann and Romer.) (vi, 1887).....                                                                      | 723      | Estimation of Tin in. (Warren.) (vii, 1888).....                                                       | 457  |
| Alkyl Groups attached to Nitrogen, Estimation of. (Herzig and Meyer.) (xiv, 1895).....                                | 688      | Ferro-Zinc, Manuf. of. (P) Marcus and others. (xiv, 1895).....                                         | 278  |
| Alkylamines, Analysis of. (Vaubel.) (xii, 1893).....                                                                  | 954      | For Coating Materials. (P) Day. (xi, 1892).....                                                        | 694  |
| Alkyl-Ethers, Manufacture of. (P) Johnson. From Bohringer and Sons. (xiv, 1895).....                                  | 861      | For Reduction of Metals, Production of. (P) Willson. (xi, 1892).....                                   | 354  |
| Alkylphenylhydrazine, Production of Symmetric. (P) Imray. From The Farbwerke vormals Meister, &c. (x, 1891).....      | 1027     | For Soldering, Merits of Different. (Rothe.) (viii, 1889).....                                         | 711  |
| Allantoin in Plants. (Schulze and Bosshardt.) (v, 1886).....                                                          | 385      | For Use in Manuf. of Wire. (P) Macdougall. (xiii, 1894).....                                           | 526  |
| In the Wheat Germ. (Richardson and Crumpton.) (v, 1886).....                                                          | 385      | Formation of, by Pressure. (Spring.) (i, 1882).....                                                    | 234  |
| Allevard, Dressing Spathie Iron Ore at. (Gromier.) (xiii, 1894).....                                                  | 1064     | Fusing Points of Re-melted Lead-Tin. (Wiesengrund.) (xiv, 1895).....                                   | 39   |
| Allhusen's Borings at Middlesbrough, Composition of Gas from. (Bedson.) (iv, 1885).....                               | 650, 721 | Gold and Platinum, Liqation of. (Matthey.) (ix, 1890).....                                             | 624  |
| Allium Ursinum, Ethereal Oils of. (Semmler.) (vi, 1887).....                                                          | 676      | Heroult Process of Smelting Aluminium. (Dewey.) (x, 1891).....                                         | 49   |
| Allocinnamic Acid, Formation of. (Liebermann and Schmolz.) (xi, 1892).....                                            | 677      | In Voltaic Cell, Electromotive Force of. (Laurie.) (xiii, 1894).....                                   | 1204 |
| Allotropy of Amorphous Carbon. (Luzi.) (xi, 1892).....                                                                | 779      | Influence of Aluminium on Carbon in Ferro-Carbon. (Hogg.) (xiii, 1894).....                            | 955  |
| Alloy, A New. (ix, 1890).....                                                                                         | 236      | Iron and Steel, Manufacture of. (P) Boulé. From Francis. (ii, 1883).....                               | 479  |
| (P) Clark. From "La Société en Participation Bourbouze et Cie." (ix, 1890).....                                       | 519      | Iron and Steel with Nickel or Copper, Manufacture of. (P) Schneider. (ix, 1890).....                   | 193  |
| (Mewburn.) (i, 1882).....                                                                                             | 322      | Manganese, Production of. (P) Thowless. (viii, 1889).....                                              | 53   |
| Aluminium. (P) Roman. (xii, 1894).....                                                                                | 956      | Manufacture of:                                                                                        |      |
| Coating Articles with Metallic. (P) London Metallurgical Co. and Cowper-Coles. (xi, 1892, 618; (xii, 1893), 362)..... | 526      | (P) Boulé. (xi, 1892).....                                                                             | 693  |
| Composition of an. (P) Cooke. (xi, 1892).....                                                                         | 615      | (P) Guetart and Chavanne. (i, 1882).....                                                               | 154  |
| Crystalline Ferro-Nickel. (Brown.) (xii, 1893).....                                                                   | 46       | (P) Moissan. (xiv, 1895).....                                                                          | 871  |
| Crystalline Iron-Tungsten. (Poleck and Grutzner.) (xii, 1893).....                                                    | 358      | (P) Radford. (iv, 1885).....                                                                           | 351  |
| Disintegration of a White-Metal Aluminium. (Hjelt.) (xii, 1893).....                                                  | 450      | (P) Sugg. (xiv, 1895).....                                                                             | 161  |
| For Closing Glass Tubes. (P) Walter. (x, 1891).....                                                                   | 646      | (P) Torres. (xii, 1893).....                                                                           | 813  |
| For Deoxidising Metal Plates. (P) Lake. From Jones. (iii, 1884).....                                                  | 822      | Manufacture of Anti-Friction. (P) Miller. From The Magnolia Anti-Friction Metal Co. (ix, 1890).....    | 867  |
| For Domestic Articles. (P) Sugg. (xiv, 1895).....                                                                     | 162      | Manufacture of, by Electricity. (P) Dymond. From Lesuyer. (ix, 1890).....                              | 196  |
| For Electrical Conductors. (P) Lake. From Shaw. (iv, 1885).....                                                       | 507      | Melting Points of Gold-Aluminium Series of. (Roberts-Austen.) (xi, 1892).....                          | 349  |
| For Manuf. of Pocket Cutlery. (P) Hobson. (xiv, 1895).....                                                            | 163      | Metallic, and App. therefor, Manuf. of. (P) Bull. (ix, 1890).....                                      | 1131 |
| For Mercurial Gilding. (P) Lowe and Levetus. (v, 1886).....                                                           | 35       | Metallic, Manufacture of:                                                                              |      |
| For Tinning. (P) Reisz and others. (viii, 1889).....                                                                  | 802      | (P) Abazaray. (xi, 1892).....                                                                          | 615  |
| Metallic:                                                                                                             |          | (P) Bull. (viii, 1889).....                                                                            | 200  |
| (P) Dixon and Skinner. (xiii, 1894).....                                                                              | 957      | (Dopiere and Spiral.) (iii, 1884).....                                                                 | 110  |
| (P) Ellis. (viii, 1889).....                                                                                          | 802      | (P) Dick. (ii, 1883), 285, 416; (iii, 1884), 641; (iv, 1885), 287; (ix, 1890).....                     | 395  |
| (P) Kuhne. (i, 1882).....                                                                                             | 154      | (P) Howarth. (xiii, 1894).....                                                                         | 815  |

| (P) Grabau. (vi, 1887) .....                                                                                  | 512           |
| (P) Green. (ix, 1890) .....                                                                                   | 741           |
| (P) Hall. (viii, 1889) .....                                                                                  | 549           |
| (P) Overbeck. From Niewerth. (ii, 1883) .....                                                                 | 478           |
| (P) Petit-Devaucelle. (ix, 1890) .....                                                                        | 195           |
| Of Aluminium, Soldering. (P) Wegner and Gühns. (xii, 1893) .....                                              | 451           |
| Of Aluminium, Use of. (P) Pickhardt. (xi, 1892) .....                                                         | 508           |
| Of Aluminium with Iron or Steel. (P) Pearson and Pratt.                                                       |               |
| (ix, 1890) .....                                                                                              | 1041          |
| Of Aluminium with other Metals. (P) Clark. (x, 1891) ..                                                       | 259           |
| Of Chromium and Iron. (Schneider.) (iv, 1885) .....                                                           | 678           |
| Of Chromium, Manganese, and Iron. (P) Eckhardt.                                                               |               |
| (viii, 1889) .....                                                                                            | 801           |
| Of Chromium, Manufacture of. (P) Slater. (iv, 1885) ..                                                        | 287           |
| Of Chromium, Production of. (P) Eaton and Vanderbilt.                                                         |               |
| (ix, 1890) .....                                                                                              | 811           |
| Of Copper and Manganese, Production of. (P) Brock and Allen. (xiv, 1895) .....                                | 369           |
| Of Copper and Nickel, Manufacture of Plates of. (P) Vivian. (viii, 1889) .....                                | 801           |
| Of Copper (Duan Metal). (Knorre.) (xiii, 1894) .....                                                          | 815           |
| Of Copper, Production of:                                                                                     |               |
| (P) Bull. (ix, 1890) .....                                                                                    | 741           |
| (P) Huntington and Prestige. (xi, 1892) .....                                                                 | 922           |
| Of Copper, Treatment of. (P) Mullins. (ix, 1890) .....                                                        | 297           |
| Of Copper with Iron or Steel and another Metal. (P) Brin. (vii, 1889) .....                                   | 807           |
| Of Ferro-Nickel and Ferro-Cobalt. (P) Clark. From La Société de Nickel et Metaux Blancs. (iv, 1885) .....     | 122           |
| Of Iron and Chromium. (Osmond and Hadfield.) (xi, 1892) .....                                                 | 910           |
| Of Iron and Nickel:                                                                                           |               |
| (Osmond.) (xiii, 1894) .....                                                                                  | 640           |
| (Wedding.) (xiii, 1894) .....                                                                                 | 955           |
| Of Iron and Silicon. (Hadfield.) (viii, 1889) .....                                                           | 788           |
| Of Iron and Steel with Nickel, Manufacture of. (P) Johnson. From McConnell. (xiv, 1895) .....                 | 663           |
| Of Manganese, Copper, and Aluminium, Physical Properties of. (x, 1891) .....                                  | 702           |
| Of Manganese, Manufacture of. (P) Greene and Wahl.                                                            |               |
| (xii, 1893) .....                                                                                             | 361           |
| Of Metals of Alkaline Earths. (P) Hulin. (xiv, 1895) ..                                                       | 1049          |
| Of Nickel and Cobalt, Manufacture of. (P) Clark. From Courbier. (x, 1891) .....                               | 259           |
| Of Nickel and Iron. (Wedding.) (xi, 1892) .....                                                               | 526           |
| Of Nickel and Steel. (viii, 1889) .....                                                                       | 896           |
| (Riley.) (vii, 1889) .....                                                                                    | 547           |
| Of Nickel and Steel, Manufacture of. (P) Schneider.                                                           |               |
| (viii, 1889) .....                                                                                            | 801           |
| Of Nickel, Copper, and Iron. (P) Martins. (xi, 1892) ..                                                       | 822           |
| Of Nickel, Manufacture of:                                                                                    |               |
| (P) Garnier. (x, 1891) .....                                                                                  | 1010          |
| (P) Marbeau. (ix, 1890) .....                                                                                 | 950           |
| (P) Mond. (xi, 1892) .....                                                                                    | 613           |
| Of Silver and Copper, Estimation of Silver in. (Roessler.) (vii, 1888) .....                                  | 457           |
| Of Sodium. (Joannis.) (xi, 1892) .....                                                                        | 641           |
| Of Sodium and Lead. (Greene and Wahl.) (x, 1891) ..                                                           | 142           |
| Of Tungsten, Manufacture of. (P) Martino. (iii, 1884) ..                                                      | 180           |
| Of Zinc, Fusion of. (P) Selve. (iv, 1885) .....                                                               | 503           |
| Oxygen in. (Ledebur.) (iv, 1885) .....                                                                        | 677           |
| Pickling of. (P) Smith. (xiii, 1894) .....                                                                    | 526           |
| Preserving the Surface of. (P) de Pass. From La Société Industrielle Commerciale des Metaux. (vi, 1887) ..... | 513           |
| Prod. and Properties of. (Roberts-Austen.) (viii, 1889) ..                                                    | 129           |
| Researches on Properties of. (Roberts-Austen.) (xiii, 1894) .....                                             | 154           |
| Resistance to Corrosion of Aluminium. (Richards.) (xiv, 1895) .....                                           | 487           |
| Separating Metals from. (P) Sherlock. (v, 1886) .....                                                         | 246           |

| Obtainment of. (Bamberger and Burgdorf.) (ix, 1890) ..                                                                                         | 605  | Aromatic, Preparation of Violet and Blue Colours from. (P) Fischer. (i, 1882) .....                                 | 145  |
| Amido-compounds for Development of Photographs. (P) Hauff. (xi, 1892) .....                                                                    | 937  | Colour Reactions of Aromatic. (Lauth.) (x, 1891) .....                                                              | 380  |
| Formation of Haloid Substituted. (Kock.) (vi, 1887) .....                                                                                      | 653  | Colouring Matters from Fatty. (P) Murray. From La Société Durand, Huzenrin, et Cie. (x, 1891) .....                 | 133  |
| Prep. and Employment of Aromatic. (P) Hauff. (xi, 1892) ..                                                                                     | 1032 | Combination of Tetrazo Comp. with. (P) Paul. (vii, 1888) ..                                                         | 432  |
| Amidocresol, Conversion of Toluylene-diamine into. (Wal-lach.) (ii, 1883) .....                                                                | 39   | Condensation of Chloral-hydrate with Tertiary. (Boess-neck.) (iv, 1885) .....                                       | 491  |
| Amidocresolsulpho Acids, Production of. (P) Lake. From Oehler. (xiii, 1894) .....                                                              | 723  | Conversion of Phenols into. (Buch.) (iv, 1885) .....                                                                | 276  |
| Amido-crotonic Acid, Manufacture of Derivatives of. (P) Abel. From Boehringer. (xii, 1893) .....                                               | 463  | Formation of Quinones from Paramethylated. (Noelting and Baumann.) (iv, 1885) .....                                 | 480  |
| Amidodialkyl-o-toluidine, Conversion of <i>m</i> -, into Methylene Blue. (Bernthsen.) (xii, 1893) .....                                        | 139  | Laws Governing the Substitution of the Aromatic. (Lim-pach.) (vii, 1888) .....                                      | 429  |
| Amidodimethylaniline mercaptide and Derivatives. (viii, 1889) ..                                                                               | 454  | Primary and Secondary, Conversion of Homologues of Phenol into. (Lloyd.) (vi, 1887) .....                           | 652  |
| Amidodiphenyl-o-disulphonic Acid. (Limpricht.) (x, 1891) ..                                                                                    | 630  | Quinones from Para-methylated. (Noelting and Bau-mann.) (iv, 1885) .....                                            | 398  |
| Amidodiphenylsulphonic Acid. (Carnelley and Schlesselman.) (v, 1886) .....                                                                     | 376  | Reactions for Aromatic. (Ihl.) (vii, 1888) .....                                                                    | 744  |
| Acid, Para-. Preparation of. (Carnelley.) (vi, 1887) .....                                                                                     | 139  | Synthesis of Rosanilines from Aromatic. (Mühlhäuser.) (viii, 1889) .....                                            | 610  |
| Amidoflavopurpurine, Prod. of Col. Mat. from. (P) Murray. From The Farbwerke vormals Meister, Lucius, and Brüning. (x, 1891) .....             | 249  | Tertiary, and Aromatic Acid Chlorides, Preparation of Rosanilines from. (Mühlhäuser.) (viii, 1889) ..               | 506  |
| Amidogene (a New Explosive). (i, 1882) .....                                                                                                   | 201  | Theory of Formation of Colouring Matters by Oxidation of Aromatic. (Barskowsky.) (vii, 1888) .....                  | 384  |
| Amidokairoline. (Feer and Koenigs.) (iv, 1885) .....                                                                                           | 752  | Thio-derivatives of Aromatic. (Holzmann.) (vii, 1888) ..                                                            | 672  |
| Amidol and Metol. (xi, 1892) .....                                                                                                             | 634  | Transference of Primary, into Mononitrophenols. (Noel-ting and Wild.) (iv, 1885) .....                              | 308  |
| Amidoaceneaphthene, Mono- and Di, Properties of. (Quinke.) (vii, 1888) .....                                                                   | 382  | Ammonia, Testing of Liquor. (Hertkorn.) (xi, 1892) .....                                                            | 457  |
| Amidonaphthalene Sulphonic Acid, $\alpha$ - and $\beta$ -. (Cleve.) (x, 1891) ..                                                               | 1002 | Ammonia, Absorption of, from Air by Soil. (Schloesing.) (ix, 1890) .....                                            | 635  |
| Sulphonic Acid, $\delta$ - and $\gamma$ -. (Cleve.) (viii, 1889) .....                                                                         | 116  | Action of Gaseous, on Magenta. (Prud'homme and Ra-baut.) (xiii, 1894) .....                                         | 382  |
| Amidonaphthol, Manufacture of Sulpho-Acids of. (P) Wilcox. From The Farbenfabriken vorm. Bayer and Co. (x, 1891) ..                            | 760  | Action of, on Cotton. (Vignon.) (x, 1891) .....                                                                     | 694  |
| Amidonaphtholdisulpho Acid, Manufacture of. (P) Newton. From Farbenfabriken vormals Bayer. (xiii, 1894) .....                                  | 943  | Action of, on Dextrose. (Stone.) (xiv, 1895) .....                                                                  | 589  |
| Acid, Manufacture of 2:7-. (P) Abel. From Actien Gesellschaft für Anilin Fabrikation. (xiii, 1894) .....                                       | 876  | Action of, on Levulose-Carboxylic Acid. (Dull.) (x, 1891) ..                                                        | 558  |
| Amidonaphtholsulpho Acids, Production of. (P) Newton. From Farbenfabriken vormals Bayer. (xiii, 1894) .....                                    | 809  | Action of, on Potassium Salts. (Girard.) (iv, 1885) .....                                                           | 503  |
| Amidonaphtholsulpho Acids, Production of. (P) Pitt. From Cassella and Co. .... (xi, 1892), 345; (xiii, 1894) ..                                | 244  | Action of, on Silver Mercurous Chloride. (Jones.) (xii, 1893) .....                                                 | 985  |
| Amidonaphtholsulphonic Acid, Preparation of. (P) Pitt. From Cassella and Co. .... (ix, 1890), 335; (x, 1891) ..                                | 918  | Action of, on Solubility of Ammonium Chloride. (Engl.) (xi, 1892) .....                                             | 238  |
| Amidonaphtholsulphonic Acid, New Dyestuffs from. (P) Pitt. From Cassella and Co. (xii, 1893) .....                                             | 674  | Action of, on Tetrolurethane. (i, 1882) .....                                                                       | 404  |
| Sulphonic Acids, Oxidation Compounds of. (Reverdin and de la Harpe.) (xi, 1892) .....                                                          | 937  | Action of Sulphur on. (Senders.) (vi, 1887) .....                                                                   | 367  |
| Amido-nitro-anthraquinone, Blue Colouring Matters from. (P) Murray. From "Farbwerke vormals Meister, Lucius, and Brüning." (xii, 1893) .....   | 923  | And Ammoniacal Salts, Collection of. (P) Cuyper. (xii, 1893) .....                                                  | 511  |
| Amidophenol, Action of Chlorine on <i>o</i> -. (Zincke and Kuster.) (ix, 1890) .....                                                           | 601  | And Ammonium Salts, Apparatus for Production of. (P) Lake. From Brisson. (iv, 1885) .....                           | 678  |
| Action of Sodium Sulphite on Salts of. (Lumière and Seyewetz.) (xii, 1893) .....                                                               | 864  | And Chlorine from Ammonium Chloride, Obtaining. (P) Mond. (vi, 1887) .....                                          | 140  |
| Colour Reaction for <i>p</i> -. (Michaëlis and Luxembourg.) (xiv, 1895) .....                                                                  | 513  | And Chlorine, Production of. (P) Mills. From Verein für Chemische Industrie. (v, 1886) .....                        | 379  |
| Ethers and Aromatic Oxaldehydes, Manuf. of Comp. of <i>p</i> -. (P) Murray. From Society of Chem. Ind. in Basel. (xiii, 1894) .....            | 274  | And Cyanogen Compounds, Manufacture of. (P) Mond. (i, 1882) .....                                                   | 364  |
| Ortho-Triphenyldioxazine as an Oxidation Product of. (Seidel.) (ix, 1890) .....                                                                | 492  | And Gas, Manuf. of. (P) Lake. From Hennin. (x, 1891) ..                                                             | 296  |
| Presence of Sulphur in Para-. (Hantzsch and Freese.) (xiv, 1895) .....                                                                         | 398  | And Hydrocarbon Gases, Manufacture of. (P) Lake. From Focarty. (iii, 1884) .....                                    | 474  |
| Production of. (P) Lake. From Oehler. (xiii, 1894) .....                                                                                       | 723  | And Hydrochloric Acid from Ammonium Chloride, Obtain-ing. (P) Mond. (vi, 1887) .....                                | 140  |
| Sulphonic Acids. (Brunner and Krämer.) (iv, 1885) .....                                                                                        | 51   | And its Salts, Manufacture of. (P) d'Andria. (viii, 1889) ..                                                        | 284  |
| Amidophenols, Carbonic Esters of Acidyl Derivatives of. (P) Murray. From The Farbwerke vormals Meister, Lucius, and Brüning. (xiv, 1895) ..... | 1061 | And its Sesquicarbonate, Manufacture of. (P) Chatfield. (viii, 1889) .....                                          | 284  |
| Ethylene Ethers of. (Krohn.) (ix, 1890) .....                                                                                                  | 289  | And Methylamines, Analysis of Mixtures of. (Quantin) (xii, 1893) .....                                              | 294  |
| Manuf. of. (P) Lake. From Leonhardt and Co. (ix, 1890) ..                                                                                      | 608  | And Nitrous Acid, Formation of, from Free Nitrogen. (Loew.) (ix, 1890) .....                                        | 979  |
| Naphthalene of Substituted. (Ulzer and Holler.) (xiii, 1894) .....                                                                             | 799  | And Tar, Collection of, from Coke Ovens. (Jicinsky.) (viii, 1889) .....                                             | 382  |
| Obtaining, in Free State. (Lumière and Seyewetz.) (xii, 1893) .....                                                                            | 864  | And Tar, Recovery of, in Making Coke. (viii, 1889) .....                                                            | 607  |
| Oxidation Prod. of Ortho-. (Fischer and Hepp.) (ix, 1890) ..                                                                                   | 1028 | And Tar, Separation of, from Gases, and Apparatus therefor. (P) Mackay. (ix, 1890) .....                            | 1120 |
| Amidophenylinduline. (Fischer and Hepp.) (x, 1891), 458; (xi, 1892), 157 ..                                                                    | 157  | Apparatus: (P) Davis. (xiii, 1894) .....                                                                            | 948  |
| Amidophenylpiperidine, Dyes from. (Lellmann and Geller.) (vii, 1888) .....                                                                     | 671  | (P) Henderson. (v, 1886) .....                                                                                      | 667  |
| Amidopyrene and Nitropyrene, Preparation of. (Gold-schmidt.) (i, 1882) .....                                                                   | 62   | Apparatus for Distillation of. (P) Meltrum. (x, 1891) .....                                                         | 462  |
| Amido-quinones and Quinone Imides. (Kehrmann.) (ix, 1890) ..                                                                                   | 603  | (P) Simon. From Berlin Anhaltische Maschinenbau-Actien Gesellschaft. (v, 1886) .....                                | 167  |
| Amido saccharine. (viii, 1889) .....                                                                                                           | 476  | Apparatus for Distilling Liquids containing. (P) Grune-bor. (i, 1882) .....                                         | 408  |
| Amido-sulpho Acid, Manufacture of. (P) Johnson. From Badische Anilin und Soda Fabrik. (xiii, 1894) .....                                       | 724  | Apparatus for Distilling Liquor for Producing Sulphate of. (P) Dempster. (vi, 1887) .....                           | 42   |
|                                                                                                                                                |      | Apparatus for Extracting, from Ammonia Soda Solutions. (P) Mond. (ii, 1883) .....                                   | 477  |
|                                                                                                                                                |      | Apparatus for Extracting, from Blast-Furnace Gases. (P) Dempster. (ix, 1885) .....                                  | 531  |
|                                                                                                                                                |      | App. for Extract. from Coal-Gas. (P) Hanson. (iv, 1885) ..                                                          | 40   |
|                                                                                                                                                |      | Apparatus for Extraction of. (P) Wells. (xi, 1892) .....                                                            | 747  |
|                                                                                                                                                |      | Apparatus for Fixing Colour on Calico by Means of. (P) Diehl. (ii, 1883) .....                                      | 245  |
|                                                                                                                                                |      | Apparatus for Manufacture of. (P) Feldman. (ii, 1883) ..                                                            | 239  |
|                                                                                                                                                |      | App. for Manuf. of Liquid. (P) Dempster. (xii, 1893) ..                                                             | 1030 |

|-----------------------------------------------------------------------------------------------------------|------|
| Apparatus for obtaining:                                                                                  |      |
| (P) Deacon and Hunter. (vi, 1887).....                                                                    | 509  |
| (P) Duncan. (iii, 1884).....                                                                              | 630  |
| (P) Lake. From Sternberg. (xii, 1894).....                                                                | 887  |
| (P) Lorenz. (iii, 1884).....                                                                              | 630  |
| (P) Wirth. From Philipp. (ii, 1883).....                                                                  | 477  |
| Apparatus for Producing Sulphate of. (P) Mills. From Fosarty. (vii, 1888).....                            | 35   |
| Apparatus for Recovery of, in Manufacture of Coke:                                                        |      |
| (P) Hornig. (ii, 1883).....                                                                               | 267  |
| (P) Schneider. (ii, 1883).....                                                                            | 329  |
| Apparatus for Separation of, from Furnace Gases. (P) Chapman. (ii, 1884).....                             | 415  |
| Aqueous Solutions of, at Different Specific Gravities. (Gruneberg.) (viii, 1889).....                     | 330  |
| Arrangements in Coke Ovens to Recover. (P) Otto. (i, 1882).....                                           | 444  |
| As a Reagent for Double Ketones. (Knorr.) (v, 1886).....                                                  | 180  |
| Bichromate of, Manufacture of. (P) Park. (vi, 1887).....                                                  | 442  |
| Carriage of Liquid, on Ship. (T.R.) (xiv, 1895).....                                                      | 889  |
| Chlorides of Mercury, Prod. of. (Andre.) (viii, 1889).....                                                | 915  |
| Claus's Process for the Purification of Coal-Gas by. (Watts.) (vi, 1887).....                             | 25   |
| Collecting, from Sewage. (P) Cox. (iv, 1885).....                                                         | 254  |
| Comparative Value of Nitrogen as, and as Nitrate. (Samick.) (viii, 1889).....                             | 556  |
| Composition of Commercial Liquid. (von Strombeck.) (xi, 1892).....                                        | 736  |
| Compounds, App. for Manuf. of. (P) Holgate. (x, 1891).....                                                | 531  |
| Compounds Formed by Colouring Matters of Magenta Group and. (Frad'homme and Rabaut.) (xiii, 1894).....    | 382  |
| Compounds from Coal-Gas. (P) Claus. (vi, 1887).....                                                       | 502  |
| Compounds of Alkali Metals with:                                                                          |      |
| (Baklanis-Roozeboom.) (ix, 1890).....                                                                     | 507  |
| (Joannis.) (ix, 1890).....                                                                                | 508  |
| Compounds of Chlorides of Mercury with. (Andre.) (ix, 1890).....                                          | 647  |
| Compounds of Mercuric Cyanide. (Varet.) (x, 1891).....                                                    | 697  |
| Compressors. (P) Osenbrück. (ii, 1883).....                                                               | 343  |
| Constants of. (von Strombeck.) (x, 1891).....                                                             | 687  |
| Conversion of Nitrogen of Oil-Works Sludge into. (Redwood.) (x, 1891).....                                | 108  |
| Cupr-, Production of. (P) Hime and Nond. (ix, 1890).....                                                  | 391  |
| Decomposition of, by Heat. (Ramsay and Young.) (iii, 1884).....                                           | 157  |
| Decomposition of Chlorides and Iodides of Amines by (Frad'homme and Rabaut.) (xiii, 1894).....            | 382  |
| Defecation of Beetroot Juice with. (Hanus.) (xiii, 1894).....                                             | 263  |
| Dehydration of. (P) Matther. (xii, 1893).....                                                             | 702  |
| Deleterious Effect of, on Plants. (Bonner and others.) (xii, 1893).....                                   | 295  |
| Detection and Estimation of, in Animal Fluids. (Latzchenberger.) (iii, 1884).....                         | 494  |
| Detection of, in Alkaline Salts. (de Koninck.) (vi, 1887).....                                            | 384  |
| Determination of:                                                                                         |      |
| (Hintz.) (vii, 1888).....                                                                                 | 772  |
| (Milne.) (vi, 1887).....                                                                                  | 423  |
| Determination of Nitric Acid as. (Reichardt.) (v, 1886).....                                              | 617  |
| Development of, in Working Iron. (Wedding.) (vi, 1887).....                                               | 664  |
| Direct Assimilation of, by Plants. (Muntz.) (ix, 1890).....                                               | 524  |
| Direct from the Air. (P) Young. (xii, 1894).....                                                          | 1136 |
| Distilling and Refrigerating App. (P) Fuller. (xii, 1893).....                                            | 743  |
| Distribution and Recovery of Anhydrous. (P) Branson, Thornburgh, and Starr. (xii, 1893).....              | 743  |
| Engines and Apparatus Connected with. (P) Campbell. (viii, 1889).....                                     | 531  |
| Estimation of:                                                                                            |      |
| (Henry.) (xiii, 1894).....                                                                                | 764  |
| (Ilosva.) (xiii, 1894).....                                                                               | 842  |
| (Stein and Schwarz.) (viii, 1889).....                                                                    | 921  |
| Estimation of Formaldehyde by Titration with. (Eschweiler.) (ix, 1890).....                               | 116  |
| Explosives from Nitrate of, and Resins. (P) Abel. From Konig. (xii, 1894).....                            | 543  |
| Extraction of, from Furnace Gases. (P) Lake. From Soc. Anon. Lorraine Indus. de Hussigny. (iv, 1885)..... | 332  |
| Extraction of, from Sewage. (P) Truchelut. (vii, 1888).....                                               | 862  |
| Ferment, Destruction of the. (Ladureau.) (vi, 1887).....                                                  | 826  |
| Flask for Estimating, in Waters. (Coleman.) (xi, 1892).....                                               | 327  |
| Form. of, at Expense of Plants. (Berthelot.) (ix, 1890).....                                              | 86   |
| Formation of, from Nitrates. (Loew.) (ix, 1890).....                                                      | 634  |
| -Freezing Machines, Modifications in. (P) Stockmann. (i, 1882).....                                       | 176  |
| From Blast-Furnace Gases. (P) Main and Galbraith. (iv, 1885).....                                         | 111  |
| From Blast-Furnaces, Processes for Recovery of. (Jones.) (iv, 1885).....                                  | 737  |
| From Coal. Influence of Temperature on Yield of. (Wright.) (vii, 1888).....                               | 62   |
| From Gas. Apparatus for Extract. (P) Lister. (xi, 1892).....                                              | 511  |
| From Gas-purifying Materials, Obtaining, before Regeneration. (P) Richters. (i, 1882).....                | 63   |
| From Gas-Water, Apparatus for Obtaining. (P) Wender. (i, 1882).....                                       | 180  |
| From Nitrogen of Minerals, Prod. of. (Bellby.) (iii, 1884).....                                           | 216  |

| For Fibrous Material. (P) Sinclair. (xii, 1893).....              | 779  |
| For Manufacture of Cellulose. (P) Kellner. (x, 1891).....         | 62   |
| For Manufacture of Paper-Pulp:                                    |      |
| (P) Davies. From Kellner. (x, 1891).....                          | 268  |
| (P) McDougall. (v, 1886) 676; (vii, 1888).....                    | 451  |
| (P) Walton. (vi, 1887).....                                       | 224  |
| For Manuf. of Paper-Pulp, Ludwig. (P) Kellner. (x, 1891) 380, 913 |      |
| For Treating Paper-making Materials. (P) Sinclair.                |      |
| (xiii, 1894).....                                                 | 751  |
| For Treating Wood, in Manufacture of Paper. (P)                   |      |
| Springer. (v, 1885).....                                          | 435  |
| For Treating Wood-Pulp. (P) Otto. (iv, 1885).....                 | 115  |
| For Treating Wood, &c. with Acid Solutions. (P) Lund-             |      |
| berg. (viii, 1889).....                                           | 301  |
| For Treating Wood with Acids. (P) Lake. From Fode-                |      |
| vist. (iv, 1885).....                                             | 243  |
| Fusible Plugs for Steam. (P) Williams. (vi, 1887).....            | 649  |
| Gas Fire for Steam. (P) Berndt and Baldermann. (i,                |      |
| 1882).....                                                        | 218  |
| Gas-firing for Steam. (P) Krotzauer. (ii, 1883).....              | 370  |
| Heating, Brewing with Gas. (P) Schafer. (i, 1882).....            | 421  |
| Heating, by Gaseous Fuel. (P) Hurry. From Ware. (ix,              |      |
| 1890).....                                                        | 170  |
| Ingot-Iron for Steam. (Kreuzpointer.) (vii, 1888).....            | 124  |
| Lagging for. (P) Clarkson. From The Mannheim                      |      |
| Gummi, Gutta Percha and Asbest Fabrik. (xii, 1893).               |      |
| Lined with Lead, &c. (P) McDougall, Hartley, and Sugden.          |      |
| (viii, 1889).....                                                 | 449  |
| Lining for Paper-Pulp. (P) Makin. (x, 1891).....                  | 157  |
| Loss of Heat in. (Schaeuer-Kestner.) (xii, 1891).....             | 1049 |
| Luminous Floats for Indicating Water-Level of. (P)                |      |
| Schlag and Bevend. (i, 1882).....                                 | 389  |
| Powder for Removing Incrustations in. (P) Allier. (vii,           |      |
| 1888).....                                                        | 313  |
| Preventing Formation of Scale in:                                 |      |
| (P) Aitken. (v, 1886).....                                        | 94   |
| (Walter.) (xiii, 1894).....                                       | 622  |
| Preventing Incrustation in Steam:                                 |      |
| (P) Fox. (vi, 1887).....                                          | 133  |
| (P) Gane. (xiii, 1894).....                                       | 504  |
| (P) Harrison. (ix, 1890).....                                     | 167  |
| (P) Lowe. (iii, 1884).....                                        | 453  |
| Prevention of Deposit in Feed Apparatus of Steam. (P)             |      |
| Arehbutt and Decey. (xi, 1892).....                               | 421  |

## Boilers—cont.

|                                                                 |        |
|-----------------------------------------------------------------|--------|
| Production of the Spheroidal State in. (Witz.) (xi, 1892)       | 667    |
| Purification of Feed-Water for. (Schreib.) (vii, 1893).....     | 26     |
| Reichling's Safety Apparatus for Steam. (v, 1886).....          | 445    |
| Removing Incrustation in. (P) Roberts. (v, 1886).....           | 454    |
| Scheuer-Kestner Experiments on use of Coal in. (Fischer.)       |        |
| (iii, 1884).....                                                | 231    |
| Substances for Covering Steam. (P) Allison. From So-            |        |
| plus Dohmann and Co. (iv, 1885).....                            | 668    |
| Steam. (P) Hesse. (xvi, 1895).....                              | 556    |
| Tannin Matters as Anti-Incrustators for. (Vignou.) (ix,         |        |
| 1890).....                                                      | 767    |
| Water Purification for Steam. (Gibault.) (xii, 1893).....       | 739    |
| Boiling and Distilling, App. for. (Leather.) (viii, 1889).....  | 81     |
| And Fusing Points, Determination of. (Le Chateher.)             |        |
| (xiv, 1895).....                                                | 821    |
| Apparatus for. (P) Lainez. (xii, 1893).....                     | 509    |
| Method of Preventing Tumultuous. (Piesczek.) (vi, 1892)         | 181    |
| Point Determinations. (Schleiermacher.) (x, 1891).....          | 657    |
| Point, Distillation of Substances having a High. (P) Jaffe      |        |
| and Darmstadter. (xiii, 1894).....                              | 239    |
| Points of Organic Bodies, Rule for Determination of.            |        |
| Wildermann. (ix, 1890).....                                     | 903    |
| Vessels, Method of Setting up. (Mangoldt.) (xiii, 1894).....    | 239    |
| Boldin: A New Hypnotiser. (Guramville.) (vii, 1888).....        | 585    |
| Boldin. (vii, 1888).....                                        | 866    |
| Bolivia, Antimony and Bismuth in. (T.R.) (xiii, 1894).....      | 912    |
| Countdown in. (T.R.) (xii, 1894).....                           | 673    |
| Cinchona Bark from the Mapiri River in. (Schafer.) (vii,        |        |
| 1888).....                                                      | 151    |
| Economic Condition of. (T.R.) (xii, 1893).....                  | 298    |
| Industrial Openings in. (T.R.) (x, 1891).....                   | 1043   |
| Mineral Resources of. (T.R.) (x, 1891).....                     | 283    |
| Resources of. (T.R.) (x, 1891).....                             | 867    |
| Trade of. (T.R.) (vi, 1887).....                                | 463    |
| Bomb-Calorimeter, Description of. (Slosson and Colburn.)        |        |
| (xiv, 1895).....                                                | 353    |
| Bombax Pentandrum. (Arnaud.) (xii, 1894).....                   | 147    |
| Bombay, Paper-making in. (T.R.) (xiv, 1895).....                | 836    |
| Bombay Meri, Silk Secretion by. (Dubois.) (ix, 1890).....       | 1163   |
| Bone and Wood Burner. (P) Schafer. (ii, 1883).....              | 130    |
| Apparatus for Grinding. (P) Firth and Whitehead. (ix,           |        |
| 1890).....                                                      | 480    |
| Bone-Ash, Analysis of. (Weibull.) (vii, 1893).....              | 869    |
| Composition of. (Macadam.) (vii, 1888).....                     | 92, 94 |
| Manufacture of Phosphorus, &c. from. (P) Polie-Desjar-          |        |
| ains. (x, 1891).....                                            | 642    |
| Bone-Black, Apparatus. (P) Barr. (ii, 1883).....                | 90     |
| Decarbonisation of. (Horne.) (xv, 1895).....                    | 977    |
| Furnace for Making. (P) Schafer. (ii, 1883).....                | 130    |
| Furnace for Revivifying. (P) Weber. (i, 1882) 493;              |        |
| (ix, 1890).....                                                 | 168    |
| Manuf. of. (P) Alexander. From Castner. (ii, 1883).....         | 239    |
| Production of Sugar without. (vi, 1887).....                    | 553    |
| Retorts used in Manufacture of. (P) Nepp. (i, 1882).....        | 405    |
| Revivifying. (P) Roddie. From Cheshbrough. (i, 1882)            |        |
| Treatment and Revivification of. (P) Miller. (i, 1882).....     | 377    |
| Treatment of. (P) Degeuer and Lach. (iv, 1885).....             | 682    |
| Washing. (P) Lillie. (i, 1882).....                             | 513    |
| Bone-Dust, Ratio between Lime and Phosphoric Acid in.           |        |
| (Lookeren-Campagne.) (vii, 1888).....                           | 222    |
| Slow Weathering of Crude. (Konig.) (ii, 1884).....              | 187    |
| Value of Nitrogen in. (ii, 1884).....                           | 185    |
| See also Bone-Meal.                                             |        |
| Bone-Earth, Decomposing, with Sulphuric Acid. (Stolba.)         |        |
| (vii, 1888).....                                                | 333    |
| Bone Fat. (Valenta.) (vii, 1888).....                           | 219    |
| Analysis of, and Loss of Nitrogen in Manufacture. (Born-        |        |
| trager.) (vi, 1887).....                                        | 825    |
| Bone Flour, Composition of. (Macadam.) (vii, 1888).....         | 82     |
| Grinding, Avoiding Dangers of. (ix, 1890).....                  | 272    |
| Manufacture of Lactine as a Substitute for. (P) Callender.      |        |
| (ix, 1890).....                                                 | 1017   |
| Bone-Meal. (Konig.) (x, 1891).....                              | 151    |
| And Thomas-Slag Phosphoric Acid, Comparative Values of.         |        |
| (Guntz.) (ix, 1890).....                                        | 523    |
| Composition of. (Macadam.) (vii, 1888).....                     | 82     |
| Constitution of. (Stoklasa.) (ix, 1890).....                    | 420    |
| Deprived of its Lime: Value of Phosphoric Acid in.              |        |
| (Heiden.) (viii, 1889).....                                     | 125    |
| Detection of Mineral Phosphates in. (Lorenz.) (vii, 1889)       |        |
| Examination of. (Hess.) (xii, 1893).....                        | 551    |
| Industry in Germany. (T.R.) (xii, 1893).....                    | 964    |
| Manufacture of. (Konig.) (iii, 1884).....                       | 575    |
| Manual Value of. (Marek.) (ix, 1890).....                       | 523    |
| Manufacturing Rye with Kamite and. (Steffens.) (iii, 1884)..... | 417    |
| Solubility of Phosphoric Acid of. (Otto.) (xii, 1893).....      | 455    |
| See also Bone-Dust.                                             |        |
| Bone-Powder, Analysis of. (Heiden.) (vii, 1888).....            | 133    |
| Bones, Apparatus for Carbonising. (P) Mills. From Zwi-          |        |
| linger. (iv, 1885).....                                         | 536    |
| App. for Drying and Mixing. (P) Holston. (x, 1891).....         | 625    |
| Apparatus for Extracting Fat and Glue from. (P) Nawrocki.       |        |
| From Wellstein. (iv, 1883).....                                 | 227    |
| Apparatus for Extracting Fat from:                              |        |
| (P) Berliner. (v, 1886).....                                    | 672    |
| (P) Schneider. (iii, 1884).....                                 | 33     |
| (P) Steimmüller. (iv, 1885).....                                | 226    |

| Acid Gas, Raising Beer by Means of.                                    | (P) Boulé. From Lauer. (iii, 1884)                                        |
| Acid Gas, Recovery of.                                                 | (P) Walker. (xi, 1892)                                                    |
| Acid, Grouven's Furnace for Preparation of.                            | (Meyer-Mulsen.) (iii, 1884)                                               |
| Acid, Impregnating Beer with.                                          | (P) Mills. From Universal Carbonating Co. (xi, 1892)                      |
| Acid in Beer, Presence of.                                             | (Langer.) (ii, 1883)                                                      |
| Acid in Coal-Gas, Measurement of.                                      | (Wanklyn.) (iii, 1884)                                                    |
| Acid, Influence of, on Fermentation and Keeping of Beer.               | (Delbrück.) (vi, 1887)                                                    |
| Acid, Influence of, on Keeping Bottled Beer.                           | (Delbrück.) (vi, 1887)                                                    |
| Acid, Influence of Oxygen on Formation of.                             | (Giltay and Aherson.) (xiv, 1895)                                         |
| Acid, Liquid, under Regulated Pressure.                                | (Zimmermann.) (ii, 1883)                                                  |
| Acid, Manufacture of:                                                  |                                                                           |
| (P) Enquist. (xiii, 1894)                                              | 948                                                                       |
| (P) Mond and Hewitt. (vii, 1888)                                       | 122                                                                       |
| (P) Raken. From Beins. (iv, 1885)                                      | 416                                                                       |
| Acid, Manuf. of, and App. therefor.                                    | (P) Stamb. (vii, 1888)                                                    |
| Acid, Manufacture of, in Sugar Works.                                  | (vi, 1887)                                                                |
| Acid, Manuf. of Solid.                                                 | (P) Tiebhorne and others. (xi, 1892)                                      |
| Acid, Manufacture of Vanilloyl.                                        | (P) Imray. From La Société de Lait. (xi, 1892)                            |
| Acid, Measuring Apparatus for Liquid.                                  | (P) Luhmann and Rommenholler. (v, 1886)                                   |
| Acid, Obtaining, from Water-Gas.                                       | (P) Claus. (ix, 1890)                                                     |
| Acid, Precipitation of Phenol by.                                      | (Lange.) (ii, 1883)                                                       |
| Acid Pressure App.                                                     | (P) Browne. From Beck. (xiii, 1894)                                       |
| Acid, Production of:                                                   |                                                                           |
| (P) Luhmann. (x, 1891)                                                 | 769                                                                       |
| (P) Walker. (xii, 1893)                                                | 1030                                                                      |
| Acid, Production of Acid Derivatives of Alkyl Salts of Paramidophenol. | (P) Newton. From The Farben-fabriken vormals F. Bayer and Co. (xiv, 1895) |
| Acid, Prod. of Liquid, at Birmingh.                                    | (Hensler.) (iv, 1885)                                                     |
| Acid, Production of Pure.                                              | (P) Lake. From Behnke and others. (xii, 1893)                             |
| Acid, Receipts for Liquid.                                             | (P) Knoop. (vii, 1888)                                                    |
| Acid, Recovery of, in Soda Manufacture.                                | (P) Cheesbrough. From Hawliczek. (v, 1886)                                |
| Acid, Separating, from Gases.                                          | (P) MacCallum. From Reissig and Landin. (x, 1891)                         |
| Acid, Separation of Carbonic Oxide from.                               | (P) Gardner. From Henderson. (vii, 1888)                                  |
| Acid, Solution of Calcium Carbonate by.                                | (Engel.) (v, 1886)                                                        |
| Acid, Solution of Magnesium Carbonate by.                              | (Engel.) (iv, 1885)                                                       |
| Acid, Treatment of Sodium Bicarbonate to obtain.                       | (P) Campbell and others. (x, 1891)                                        |
| Acid, Use of Liquid, for Filtration of Liquids.                        | (d'Arsonval.) (x, 1891)                                                   |
| Acid, Util. of Waste, in Breweries.                                    | (Maret.) (xii, 1884)                                                      |
| Acid, Vessels for Transporting Liquids containing.                     | (P) Nitykowski. (i, 1882)                                                 |

Carbonic—*cont.*

## PAGE

|                                                                              |                                                                                |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Acid Water, Calcium Phosphite in, as a Beverage.                             | (P) Williams and Symons. (x, 1891)                                             |
| Acid, Washers for Extraction of, from Coal-Gas.                              | (P) Cripps. (xiii, 1894)                                                       |
| Anhydride, Apparatus for Estimation of.                                      | (Lunge and Marchlewski.) (x, 1891)                                             |
| Anhydride, Apparatus for Washing.                                            | (iv, 1885)                                                                     |
| Anhydride, Application of Liquid, for Manufacture of Mercurial Thermometers. | (Mahlke.) (xii, 1893)                                                          |
| Anhydride, Assimilation and Respiration of, by Plants.                       | (Kreusler.) (vi, 1887)                                                         |
| Anhydride, Diffusion of, through Caoutchouc.                                 | (Obach.) (ix, 1890)                                                            |
| Anhydride, Estimation of.                                                    | (Petterson.) (ix, 1890)                                                        |
| Anhydride, Prep. of Solid.                                                   | (Villard and Jarry.) (xiv, 1895)                                               |
| Anhydride, Saturating Tank for.                                              | (P) Forstrenter. (iv, 1885)                                                    |
| Anhydride, Unstable Compound of Phenol with.                                 | (Klepl.) (i, 1882)                                                             |
| Esters, Manufacture of.                                                      | (P) Imray. From The Farbwerke vormals Meister, Lucius, and Brumig. (xiv, 1895) |
| Oxide, A Reaction of.                                                        | (Berthelot.) (x, 1891)                                                         |
| Oxide, Absorption of, by Cuprous Chloride.                                   | (Hempel.) (vii, 1888)                                                          |
| Oxide, Absorption of, by the Earth.                                          | (Berthelot.) (ix, 1890)                                                        |
| Oxide, Action of Heat on.                                                    | (Berthelot.) (x, 1891)                                                         |
| Oxide, Action of, on Iron and Manganese.                                     | (Guntz.) (xi, 1892)                                                            |
| Oxide and Hydrogen, Combustion of.                                           | (Dixon.) (v, 1886)                                                             |
| Oxide and Iron, Volatile Compound of.                                        | (Mond and Quinke.) (x, 1891)                                                   |
| Oxide and Water, Reaction of, at High Temperatures.                          | (Naumann and Pistor.) (v, 1886)                                                |
| Oxide, Assimilation of, by Plants.                                           | (Just.) (i, 1882)                                                              |
| Oxide Gas, Manufacture of.                                                   | (P) Fritsch. (vi, 1887)                                                        |
| Oxide Gas Prep., and App. therefor.                                          | (P) Hart. (ix, 1890)                                                           |
| Oxide Gas, Production of Pure.                                               | (P) Williams. (x, 1891)                                                        |
| Oxide, Hygienic Significance and Detection of.                               | (Fokker.) (iii, 1884)                                                          |
| Oxide, Infl. of, on Germination.                                             | (Linossier.) (viii, 1889)                                                      |
| Oxide, Preparation of.                                                       | (Noack.) (ii, 1883)                                                            |
| Oxide, Production of Gas Free from.                                          | (P) MacCallum. From Reissig and Landin. (x, 1891)                              |
| Oxide, Separation from Nitrogen and other Gases.                             | (P) Gardner. From Henderson. (vii, 1888)                                       |
| Oxide, Separation of, from Furnace Gases.                                    | (P) Huntington. (iv, 1885)                                                     |
| Oxide, Volatilisation of Iron and Nickel by.                                 | (Garnier.) (xi, 1892)                                                          |
| <i>See also under Carbon Monoxide.</i>                                       |                                                                                |
| Carboniferous Materials, Extracting Products from.                           | (P) Stier. (v, 1886)                                                           |
| Carbonisers.                                                                 | (P) Bellerstein. (x, 1891)                                                     |
| Carbonyl Chloride, Preparation of.                                           | (Erdmann.) (xiii, 1894)                                                        |
| Sulphide, Formation of.                                                      | (Bottinger.) (viii, 1889)                                                      |
| Carbonyls, Metallic.                                                         | (Mond.) (xi, 1892)                                                             |
| Carbonylorthamidophenol, Constitution of.                                    | (Gressly and Nenekl.) (ix, 1890)                                               |
| Carborundum, Physical Properties and Chemistry of.                           | (Mathews.) (xiv, 1895)                                                         |
| Carbotriethyloxabromide, Action of Heat on.                                  | (Hell and Urech.) (ii, 1883)                                                   |
| Carboxyl Derivatives of Dimethylaniline.                                     | (Lauth.) (xiii, 1894)                                                          |
| Group, Influence of, on Action of Aromatic Compounds.                        | (Neuhaus and Bantmy.) (xi, 1892)                                               |
| Group, Lake Formation in the.                                                | (Weber.) (xii, 1893)                                                           |
| Groups in <i>o</i> -Position. Tests for.                                     | (Von Rothenburg.) (xiv, 1895)                                                  |
| Carboxylic Acid, Hydrazine Derivatives of.                                   | (Noelting.) (xi, 1892)                                                         |
| Acids, Formation of Orthosulphamine.                                         | (Fahlberg and List.) (vii, 1888)                                               |
| Acids in Coal-Tar, Occurrence of.                                            | (Schulze.) (iv, 1885)                                                          |
